The negative statement with regard to inventive step relies on JP-A-54 120 646.

As apparent from the English language abstract of that document cited in the search report, the concept of a heat sealing film comprising from 10 to 80 percent by weight of an "SB block copolymer resin" (i.e. a block copolymer of from 60 to 95 percent by weight of a styrene type hydrocarbon and of from 5 to 40 percent by weight of a conjugated diene type hydrocarbon), from 5 to 50 percent by weight of an "EO random copolymer" (i.e. an ethylene α -olefin random copolymer) and from 10 to 50 percent by weight of an "SB block copolymer elastomer" (i.e. a block copolymer of from 10 to 50 percent by weight of a styrene type hydrocarbon and of from 50 to 90 percent by weight of a conjugated diene type hydrocarbon) formed part of the state of the art at the priority date of the application under examination.

The inventions defined by claims 1 to 12 are considered obvious because they appear to merely concretise or supplement the concept identified in the preceding paragraph by

- (i) presenting the requirement that the haze of the heat sealing film should be no more than 30 %, which requirement would have been regarded as desirable by any person skilled in the relevant technical field,
